Collaborative Learning Environment

Multi-location Learning

CubeShare

CubeShare is a browser based, canvas sharing software product. It allows for collaboration amongst participants who can be in the same location or anywhere in the world. All that is needed is a good quality internet connection. The basic concept is that a teacher will create a lesson in CubeShare and invite participants to attend via a URL web link. Students can attend the meeting via web browser on any platform or by downloading an app on their tablet/mobile device. Once in the meeting, the teacher and all logged in participants will be able to see the same canvas and collaborate via annotation and sharing documents/images.
