# CubeShare

COLLABORATION SOFTWARE

CubeShare is a cloud based presentation delivery tool that works a with our Interactive Displays to offer a complete solution.

Remove Limitations

WITH CUBESHARE SOFTWARE

CubeShare is a wireless, collaborative presentation tool which enables all participants to engage and interact with the same canvas on any device, anywhere. Individuals are able to view and collaborate with the same canvas in real-time. This is an ideal tool for meetings, projects or presentations where all participants are either scattered across the table, country or even the world.

The number of people who can view the session is limitless, when all participants are logged onto the meeting they can interact together using built-in annotation tools, share thoughts with real time live chat and even upload external images or documents from their own device. Gone are the days of huddling round one screen, squinting to see the details.

Enhance the way your company works, make teamwork effortless, grow the confidence of your employees and as a result create a working environment that produces strong, collaborative ideas and solutions with CubeShare Software.

FEATURES & BENEFITS

UNLIMITED DEVICES

CubeShare software doesn't limit the number of participants that you can have in a meeting at any one time. All devices connect via the cloud using an authorisation code. CubeShare is Mac, Windows, iOS and Android compatible making it BYOD friendly.

REMOTE COLLABORATION

The remote collaboration ability of CubeShare enables all members of a team in any part of the world to communicate with each other, this not only makes the running of a business more streamline it also encourages team work and furthers idea generation.

LIVE ANNOTATION

The capabilities of the live annotation toolbar encourages instant feedback and analysis to all participating. It can be used as a standard pen or it is also able to draw fixed shapes such as squares and circles for annotation over larger areas.

FLEXIBLE CANVAS

The canvas size is not fixed to a single screen size, it has a significant area that you can work within. Thus removing limitations of a page edge, encouraging creativity to flow and collaboration to flourish within a team think-tank activity.

ProjectFlow

COLLABORATION SOFTWARE

ProjectFlow is a cloud based presentation delivery tool that works a with our Interactive Displays to offer a complete solution.

PROJECT Flow

Explore The Possibilities

WITH PROJECT FLOW SOFTWARE

ProjectFlow is a cloud-based platform, it is a presentation tool compatible with any computing device. The tool allows the presenter to share content including animation, videos, resources, documents, briefs, interactive activities and tasks to an audience's device instantly.

What makes it so unique is its approach to differentiation, for example if you were presenting to multiple teams within your company then groups can be pre-created within ProjectFlow, Marketing, Field Sales, Team Leaders etc. This then allows you

with only 1 click, during your presentation, to deliver the required differentiated content automatically to the relevant teams, ensuring that the resources or documents are only seen by the individuals that they are intended for.

This abolishes the need for endless printed materials to be handed round a meeting room, saving you money and time, they cannot be lost or left behind or seen by those who they were not intended for. Project Flow provides you with a more streamlined system and makes your business more efficient.

FEATURES & BENEFITS

UNLIMITED DEVICES

ProjectFlow software doesn't limit the number of participants that you can have in a session at any one time. All devices connect via the cloud using their own logins. ProJect Flow is Mac, Windows, iOS and Android compatible making it BYOD friendly.

MAINTAINING FOCUS

The presenter has the power to block all devices that are logged into a session. This prevents attentions being distracted by the content on their screens when focus is needed on the information that is being relayed to them by the presenter.

INTERACTIVE ACTIVITIES

A great tool for training sessions or as an ice breaker. Interactive activities can be sent directly to the audiences devices, these can then be instantly uploaded to the presenters screen and all can participate in answers and opinions given by their colleagues.

ASK QUESTIONS

Project Flow allows questions to be asked instantly by both the presenter and the audience, these can then be answered individually or as a group. This tool adds to the interactivity between the presenter and audience, encouraging all to participate.
